

Chicago Fire Department Takes Delivery of Two ManHandler Super Dollies

Sunday, August 10, 2008 - Main Line Corporation

The Chicago Fire Dept. Air Sea Rescue Unit has taken delivery of two ManHandler Super Dollies to expedite ground handling of their two Bell 412 Helicopters. The Platform type Dollies permit rapid movement from the hangar to the take off area and vice versa. There is no need to install or remove ground handling wheels.

ManHandler Helicopter Dollies are manufactured by Main Line Corporation, Wilmington, Delaware, USA <http://www.helicopterdolly.com/>

About Main Line Corporation

Mainline Helicopter Corporation, as an air taxi service company, saw the need for a device that would allow one person to move a skid-equipped helicopter. Four models were developed over time to accommodate a wide range of helicopters.

Company President Jacques C. Guequierre, a veteran helicopter pilot and owner, has been building MANHANDLER Helicopter Dollies since 1967. He has over 35 years of helicopter flying experience, gleaned from years of military and commercial service.

Clients using MANHANDLER Helicopter Dollies have been dolly-related accident free for over 30 years. Considered an industry standard by various law enforcement and government agencies, MANHANDLER dollies are overbuilt for maximum safety and ease of movement by minimal staffing.
